

Juan Cortes

Los Angeles, CA • (831)-737-8228 • juancortes.management@gmail.com

EDUCATION

University of California, Los Angeles

Masters of Applied Statistics and Data Science (MASDS)

Area of Focus: Introduction to Probability Models, Applied Regression, Statistical Computing and Programming, Data Management

Expected July 2027

Current GPA: 3.85

California State University, Chico

Bachelor of Science in Mathematics (Statistics), Data Science Certificate

December 2024

GPA: 3.59 | Cum Laude

TECHNICAL SKILLS

Programming & Libraries: Python (pandas, scikit-learn, PyTorch), R (tidyverse, Shiny) SQL/MySQL, C++, Git/Github

Methods: Regression, classification, decision trees, neural networks, model diagnostics and validation, survey analysis, data visualization

Data & Delivery: Relational databases, data pipelines, cleaning and validation, reproducible reporting, dashboards, technical documentation, stakeholder presentations

EXPERIENCE

Center for Healthy Communities, Chico State Enterprises | Chico, CA

Program Assistant I - II

Jan 2024 – Sep 2025

- Built reproducible R pipelines to ingest, clean, validate, and analyze **2,000+ student-service records**, improving data consistency and reducing manual reporting work - [Dashboard](#)
- Designed and maintained **interactive Shiny dashboards** with filters, trend metrics, and visualizations used by faculty and program staff to monitor outreach, service utilization, and program outcomes.
- Partnered with principal investigators, nutrition and public-health staff, and program leaders to translate operational questions into analysis plans, codebooks, data dictionaries, and quarterly evaluation reports.
- Independently managed analytical requests from data extraction and quality assurance through interpretation, documentation, and presentation to **nontechnical stakeholders**.

Project DAFANH, USDA-Funded Multi-Campus Initiative | Chico, CA

Project Assistant and Peer Mentor

Jul 2024 – Dec 2024

- Mentored **10+ undergraduate interns** in R, data wrangling, visualization, and reproducible analysis; reviewed code and analytical outputs for accuracy, consistency, and clear interpretation.
- Coordinated milestones, documentation, and remote collaboration across interns, faculty, and program stakeholders.

Research and Evaluation Intern

Aug 2023 – Dec 2023

- Conducted data collection, cleaning, exploratory analysis, and survey evaluation for food- and health-related programs, including analysis of engagement trends across **150+ respondents**.
- Converted program questions into testable analyses and summarized findings for evaluation and continuous-improvement decisions.

SELECTED PROJECTS

Health Care Cost Modeling | R, Linear Regression

- Built and compared models of cost per visit using centered predictors and interaction terms; evaluated residuals, leverage, multicollinearity, confidence intervals, and model fit, then translated results into an applied report.

Python Machine Learning Portfolio | Python, pandas, scikit-learn, PyTorch

- Developed classification, regression, and neural-network workflows using train/test splits, preprocessing, confusion matrices, per-class metrics, and reproducible Git-based development.

CalFresh Outreach Sign-In Dashboard | R Shiny

- Developed an interactive application that automated processing and reporting for **2,000+ visits** and enabled staff to explore service trends through user-controlled filters and visual summaries.

RECOGNITION

Best Visualization Award, ASA Data Fest 2024 - Chico, CA

- Collaborated in a 48-hour team competition to analyze, visualize, and present insights from a complex real-world dataset.
